

2-day In-person Seminar:

HIPAA Compliance 2018

San Diego, CA

February 26th & 27th, 2018

9:00 AM to 6:00 PM

Jim Wener,

HIPAA Professional, GPSJWB, LLC

Jim Wener has over 40 years of experience in assisting health care organizations - both providers and payers- in identifying their automation requirements and helping these organizations select and successfully implement the automation most applicable for their needs. Since 1996 he has been an active lecturer, trainer and HIPAA assessment consultant helping a variety of health care providers (hospitals, payers, clinics and individual physician practitioners) become HIPAA compliant. He developed the IBM HIPAA assessment and training products for their consulting practice.

Overview :

This two day seminar takes the participants through HIPAA compliance from start to compliance.

The first presentation explains the history of HIPAA, why it came to being and its evolution. This covers what HIPAA is, what steps have to be performed to be HIPAA compliant and what HIPAA compliance is. It also provides definitions to key HIPAA terms, how to define a Business Associate and how to contract with Business Associates. The second part of the first presentation is an overview of how to manage the HIPAA compliance project. At the end of these presentations there will be a workshop to demonstrate how to use these tools.

Agenda:

Day One

Lecture 1: Introduction of History of HIPAA; How to Manage the HIPAA Compliance Project

Lecture 2: How to Perform a HIPAA Risk Assessment

Lecture 3: Developing HIPAA Policies and Procedures

Lecture 4: Performing HIPAA Training

Why you should attend:

Although healthcare news and the internet is replete with articles and descriptions of the HIPAA privacy and security regulations, there remain many misconceptions of what these regulations mean to healthcare organizations and what they, and their business associates, need to do to become compliant. Healthcare organizations know they have to secure patient health care information. However, a number of questions need to be answered to meet that goal.

What does this mean? Do the HIPAA regulations apply to the organization? What are the organization's risks and how does the organization mitigate these risks? What does the organization have to do and how does the organization do it? What role does the organization's computer resources have in the risks? How safe is my computer and paper patient information? How does the organization know if its computer resources provide the needed features and functions for the organization to become compliant? What resources are needed and what do these resources need to do? What is a Risk Assessment and why does the organization need one? Does the organization need an attorney or a consultant? How does the organization know if it is compliant? What is a breach and how does the health care organization

Day Two

Lecture 1: IT Roll in HIPAA Compliance

Lecture 2: How to Develop a Disaster Recovery/Business Continuation Plan

Lecture 3: How to Handle a HIPAA Breach
